Q6. Is there any variable/column that looks to be on a different scale to the majority of the other columns in the dataset?

yes the winpercent is on a much larger scale

Q7. What do you think a zero and one represent for the candy\$chocolate column?

whether or not it has chocolate in it

```
library(ggplot2)
```

```
library(dplyr)
```

Attaching package: 'dplyr'

The following objects are masked from 'package:stats':

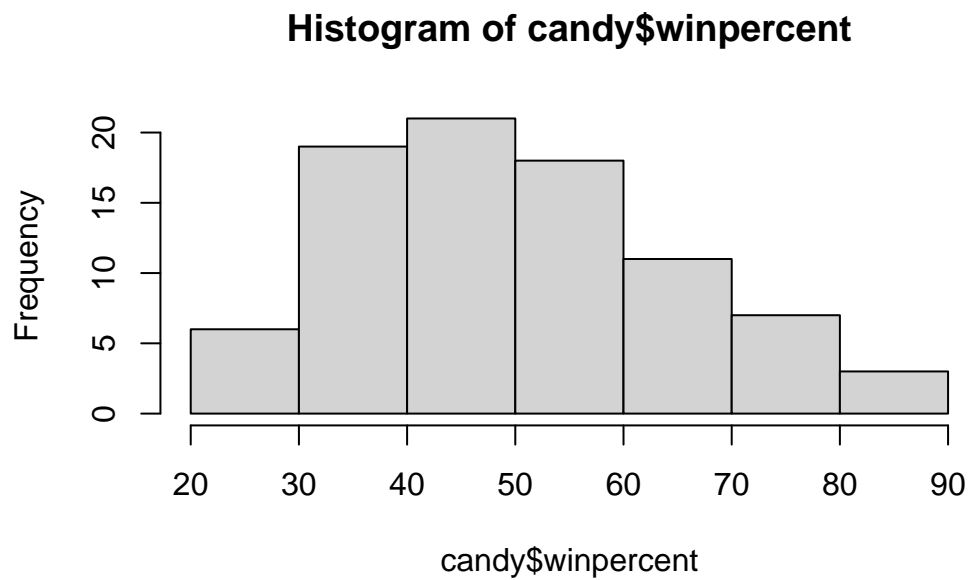

`filter`, `lag`

The following objects are masked from 'package:base':

`intersect`, `setdiff`, `setequal`, `union`

Q8. Plot a histogram of winpercent values

```
hist(candy$winpercent)
```

Q9. Is the distribution of winpercent values symmetrical?

No

Q10. Is the center of the distribution above or below 50%?

below 50%

Q11. On average is chocolate candy higher or lower ranked than fruit candy?

```
win.choc <- candy[as.logical(candy$chocolate), "winpercent"]  
  
win.fruit <- candy[as.logical(candy$fruity), "winpercent"]  
  
mean(win.choc)
```

```

Q24. What original variables are picked up strongly by PC1 in the positive direction? Do these make sense to you?

fruity, hard & pluribus which makes sense cause most fruity candy is hard and comes in packages of many candies
